- The customized map size has an error rate of 0.5% due to artificial involvement in cutting. Each of the map's 4 sides has 1cm blank area left for map mounting. Therefore, the map's picture size should minus 2 cm for both its length and height;
- The pipelines' line weights are divided to 3 groups by their designed annual capacity (100+ mtpa, 1-10 mtpa and below 1 mtpa);
- Your company name will be, by default, added into the map;
- Table of China's Crude Oil Pipelines** introduces each recorded pipeline's name, main area, status, company;
- China's Crude Oil Balance Sheet**: Each year's data include figures of China's total crude oil available for consumption (output, imports, exports, stock changes in the year); total consumption (by main industry sectors); consumption by usage (final consumption, intermediate consumption for main sectors, losses in oil field for crude oil) and balance;
- China's Crude Oil Consumption by Industries**: China's crude oil consumption figures by 51 industry sectors.
- Latest Research Data on China's Oil Refineries** introduces each recorded project's name, province, city, status, company, current crude oil process capacity, planned crude oil process capacity growth in short term and planned crude oil process capacity growth in long term;
- Industry research statistics tables in Senior Analyst+ edition maps introduce the latest 17 years' data officially published by China's state statistics authority. Please note that nationwide data from state authority will be published during June and be delayed, as a practice, by two years. Therefore, the latest year that contains statistics data will be "the year before last year".
